

TOPIC: THE SOLAR SYSTEM

TR. DENIS TWINAMATSIKO

S3 PHYSICS

NEW CURRICULUM

X EDITION

February 27, 2026

- The solar system is the collection of celestial bodies that orbit around the Sun with the sun inclusive.

KEY words

- Solar
- ocean tides
- Phases of the moon
- Day and night
- Seasons

Definition

The solar system is the collection of celestial bodies that orbit around the Sun.

COMPONENTS OF THE SOLAR SYSTEM

- The sun
- Planets
- Moons
- Comets
- Asteroids

How Many Planets Are There In The Solar System?

Comet

MOTION OF PLANETS AROUND THE SUN

The motion of planets is both:

- Rotational
- Revolutionary

DAY AND NIGHT

It caused by:

- 1. Shape of earth (Spherical).
- 2. Rotation of the earth about its axis.

THE SEASONS ON EARTH

Seasons are caused:

- 1. Revolution of the earth around the sun.
- 2. Axis of the earth is tilted.

They include:

- 1. Dry and Wet seasons (For equatorial regions)
- 2. Winter and Summer, Spring and Autumn

THE MOON

- The moon is about a quarter of the size of the earth in width
- The moon is at a distance of about 384,400 km from the earth
- The moon is the largest natural satellite on the earth.

PHASES OF THE MOON

PHASES OF THE MOON

OCEAN TIDES

Tides are categorized into:

- High tides.
- Low tides.

Spring Tide

ORIGIN AND STRUCTURE OF THE UNIVERSE

- Bibilical theory.
- Steady state theory.
- Big bang theory (Scientific theory of evolution).
